

**IT'S REALY HOT SUMMER , HYROBOTICS SPECIAL DISCOUNT FOR NON A/C FACTORY.
(GET 5% DISCOUNT MORE FROM QUOTATION DURING AUG, 2006 only)**

IMM Operator

Shift Supervisor

Operator : I feel dizzy, I can't not open and close the injection molding machine door any more because it's too hot and heat radiation from nozzle is almost killing me.

Shift Supervisor : Mam, I understand your situation it will be better soon. I feel terrible this place also. Why don't we go to Plant manager together.

Shift Supervisor : Sir, It's too hot in the plant. A/C is not working properly. Machine Operators are leaving or not coming back to work due to hot weather. Productivity is less than 50% of normal time. What do we need to do.?

Plant Manager : I am also having headache, Customer is complaining about late shipment and quality problem especially during this hot summer season. We need to find a better way. Isn't it time to go home yet ?

Shift Supervisor : Sir, Many other molders are automating their molding machine, one of our neighbor spent few thousands dollors to install sprue / parts picking robots from HYRobotics few month ago, They just keep adding HYRobotics Sprue Picking Robot for their molding machines. I think they already paid back from automation investment. And move operators to A/C's place for Inspection, Packaging, Assembly for better job environment.

IMM Operator : Yes, my friends are working automated plant, plant didn't have A/C but inspection room, packaging room has A/C. They said, it's really good place to work. They don't need to stand every seconds to open and close molding machine doors especially during this hot summer season.

Plant Manager : I understand what you are saying, but if we spent few thousands dollars, we might have to let you go.

Shift Supervisor : We can move her to inspection or packaging station. Also I've heard that we can get some financing for this equipment. If we spent over Twenty thousands dollors for this 5 Robots, we only need to pay few hundreds dollors / months.

Plant Manager : I have also concern who is going to maintenance and control that robots. We might have to hire someone and that will cost another few thousands dollors per month.

Shift Supervisor : They said it's really easy and if we know how to use Voltmeter, we can even install the robot by our selves.

Plant Manager : Really !. If that is easy and cost effective, why don't we get a quote and try one out. I will talk to purchasing department today.

V.P of Purchasing : I feel hot working even in the office and I can't imagine working in the factory. I am willing spent few hundreds dollors for our employee's better job environment, let me have quotation today so that I can generate P.O in Aug to get 5% more discount.
